Management
& Homeland Security
Program*

Objective

The objective of this project is to develop an innovative wearable for the CIA, featuring an integrated gas detector, as well as additional technology to aid in building collapse search and rescue missions.

Background

Key Goals

Successfully collaborate to implement a gas sensor into our wearable technology

Improve operative safety and communication

Develop a reliable and fully functional prototype

Assumptions

The device will not exceed 40 lbs.

The device will be powered for the entire mission and not restrict movement.

The device will be used in a building collapse scenario.

Team 506 will recognize relevant gasses and calibrate their detector accordingly

New Assumptions

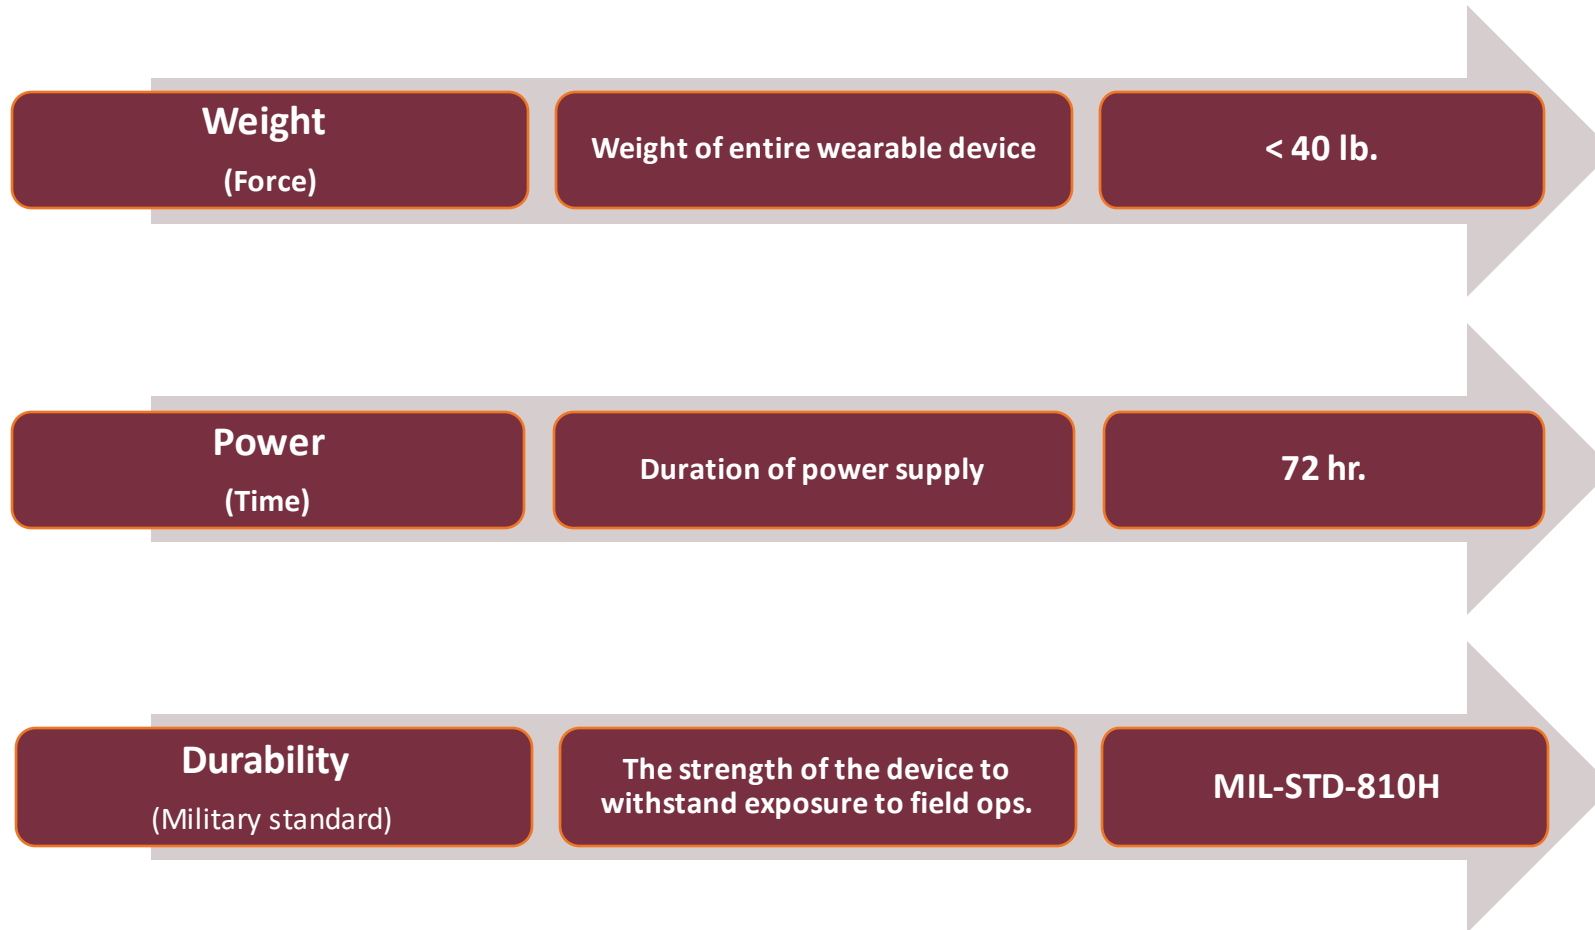

User will be wearing the device over search and rescue gear

Operatives will wear the same device and be connected to each other at the start of mission

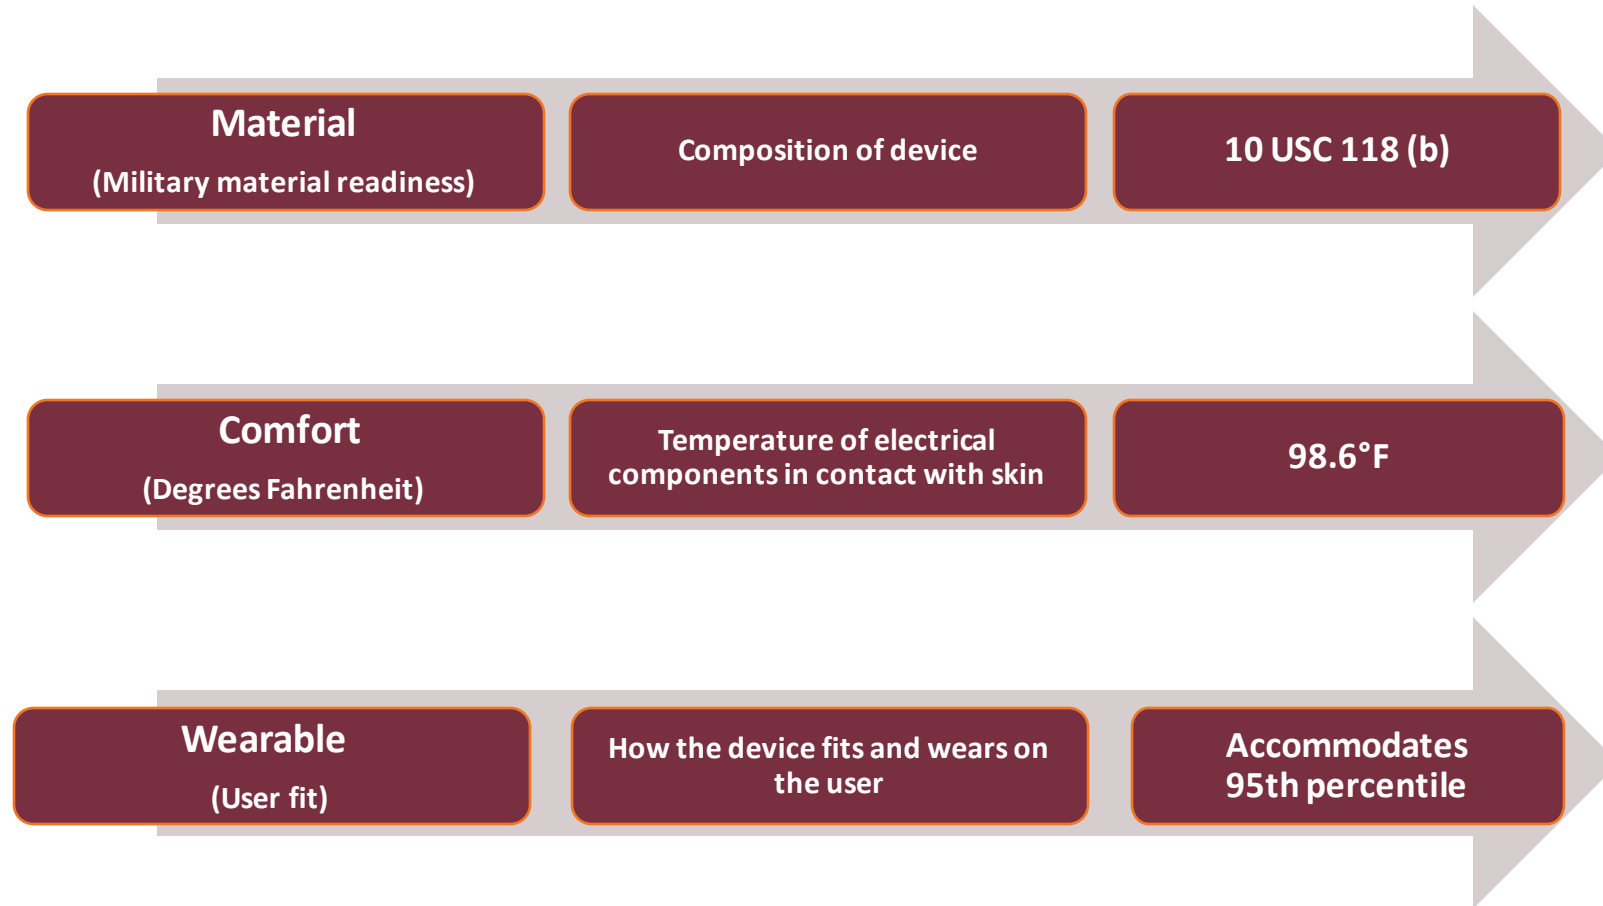

Team 506 will recognize relevant gasses and calibrate their detector accordingly
