Quarterly Progress Report – Third Quarter ending May 31, 2009
Submitted May 30, 2009

Project Title: Analysis of Discarded CRTs in Florida: Volume Projections and Disposal Management Options

Principal Investigator: Amy B. Chan-Hilton (Email: abchan@eng.fsu.edu; Phone: 850.410.6121)
Co-Principal Investigator: Gang Chen (Email: gchen@eng.fsu.edu)

Institution: Florida State University, FAMU-FSU College of Engineering, Civil and Environmental Engineering, 2525 Pottsdamer Street, Tallahassee, FL 32310

Contract Period: September 25, 2008 – August 31, 2009
Note: The subcontract between FSU and the HCSHWM was signed in October 2008, and a project budget number was activated by FSU on November 4, 2008.

Steady progress has been made since the submission of the second quarterly report. According to the project timeline (Table 1), four tasks, including the submission of second quarterly report, are expected to commence or be in progress during Quarter 3 of the project period. The progress of these tasks is detailed below.

Table 1: Timeline of project milestones (from original proposal, April 2008), where xx = completed; x = in progress.

Task 1: Collect CRT volume and disposal data.

This task will provide answers to the questions: 1) What are the current trends in the volume of CRTs discarded in Florida; 2) what are the current practices in Florida for CRT disposal management; 3) what is the currently available infrastructure for handling disposed CRTs from Florida; and 4) what are the current capacities of existing disposal and recycling facilities for CRT components? To date, efforts have been made to answer all four of these questions. In ongoing efforts, the research team is collecting current data on the volume of CRTs disposed and management practices and identifying past and recent trends in Florida. This information will help provide a snapshot of the current conditions in Florida and will form the basis for predicting future trends (Task 2).

Estimates on the existing number of CRT television sets and computer monitors...
will be made based on recent data from the U.S. census, consumer electronics industry, and other Florida-specific sources. We have conducted an extensive literature review and gathered historic data on numbers of CRTs in Florida, other states such as California, and throughout the U.S. Historical data on the production of CRT products has been obtained from manufacturers and the consumer electronics industry through the literature.

In addition, we have completed an extensive literature review of current management practices, regulations, and policies for discarded CRTs used in other states and countries. The practices used in other states and countries, and the results of their implementation, will provide potential alternative management approaches for Florida. Through the surveys (see below) we continue to investigate existing CRT demanufacturing (in which the CRT may be separated from the rest of the monitor), recycling, and disposal practices existing in Florida or are used by municipalities and facilities in Florida.

US EPA (2007, 2008) estimated disposal rates of electronics in the U.S. using data from two sources, market research data for sales and government statistics for sales, and found that resulting estimates are similar. We have estimated the duration the product is used; this also is known as the time for the product to reach end-of-life (EOL). The EOL estimates are based on data from the literature (including the EPA reports) and previous surveys. Efforts will be made to obtain data from both household and industry sectors.

The current volume of discarded CRTs in the waste stream in Florida (such as those at resellers, storage, demanufacturers, recycling facilities, and disposal facilities) also will be estimated. We currently are in the process of obtaining additional information from other existing facilities in Florida that demanufacture and recycle televisions, computers, and electronics and organizations in Florida that accept donations of electronic equipment. Information on the number, locations, capacities, and other limitations of facilities that handle CRTs will be collected. We also are obtaining information on the costs and fees related to each of these disposal options. This data and information currently is being collected using electronic surveys and telephone and personal interviews.

During Quarters 2-3, we worked closely with Jack Price and Raoul Clarke at FDEP to developing the surveys and interview questions so that a standard format may be used. See Appendix A for the three surveys circulated to 1) household hazardous waste (HHW) managers, 2) electronics recycling facilities, and 3) donation centers. The initial invitations to participate in the surveys were sent via email in February 2009 and again in March 2009. Mr. Price and Mr. Clarke at FDEP assisted with the distribution of the surveys to county HHW managers and electronics recycling facilities through listservs that they maintain.

We have received responses from 13 HHW managers, 4 electronics recycling facility, and 1 donation center. Responses from 13 counties and 4 recycling centers and 1 donation center: Seminole (Jane Marshall), Hendry (Juan Guare), Pinellas (Joseph Fernandez), Sarasota (Lois Rose), Alachua (Kurt Seaburg), Broward (Karen Smith), Citrus (Owen Carney), Charlotte (Tim McMullen), Putnam (Nancy Jones), Escambia (Jim Howes), Leon (Cyndy Brantley), Orange (Odette Padron), Lee (Emory); Southeastern Data (Allan Jackson), Global EH&S (Steve Craig), Unicor Recycling (Kevin O’Hearn), A1 Assets (David Leavitt); Goodwill Big Bend (Randy Jones). We
anticipated that one barrier to the data collection in this project is obtaining responses to the surveys. However, other tasks in this project use the survey data but do not rely solely on this data. The survey data is aggregated to provide a snapshot of recent and current trends on the volume, and disposal rate of CRTs in Florida, as well as current management options.

**Task 2: Estimate future volumes of discarded CRTs and required infrastructure.**

The results of this task will provide answers to the questions: “What are the trends in the volume of CRTs discarded in Florida expected in the near future; and will existing disposal and recycling facilities for CRT components be able to handle projected future volumes?” Using the data collected in Task 1, estimates on the future CRT waste stream will be determined.

A spreadsheet-based model using materials balance and flow modeling and analysis currently is being developed to track the life cycle of CRTs. The methodology in this task will be based on Kang and Schoenung (2006), US EPA (2007) and US EPA (2008) (see Figures 1-3). The approach is to track CRTs from when a consumer purchases a monitor or television (inflow) to when the consumer decides the item is no longer of use (outflow). Then the CRT may go into storage, to a second user (from donations or resellers), demanufacturing and recycling, and final disposal. This flow of CRTs will be modeled over a period of 3-7 years in order to make projections on the volumes of discarded CRTs and the infrastructure required to handle the waste stream. The resulting projections will form the base case for additional scenario analyses that will be conducted in Task 3.

The modeling and analysis in this task also is used to identify critical infrastructure and areas that require enhanced public education in order for the state of Florida and municipalities to handle the CRT waste stream. Based on these CRT flow projections, an analysis of whether the existing handling, recycling, and disposal facilities would be able to handle the projected future volumes will be completed. Data collected in Task 1 is used in this analysis. In addition, we will estimate the costs of CRT waste management based on these future projections. Task 2 will continue through a portion of Quarter 4 as it is closely related to Task 3.

**Task 3: Develop tool; analyze management options.**

The development of the CRT disposal and reuse management tool involves several extensive steps. The first is the development of the framework and the underlying equations. Currently, the framework for the analysis tools is being developed and will continue to be developed and implemented in a spreadsheet format.
Figure 1. Time series electronic waste flow model (Kang and Schoenung, 2006)

Figure 1. Framework for modeling product life cycle (US EPA, 2008)
Establish and maintain project web site.

A project web site has been established at [http://www.eng.fsu.edu/~abchan/CRTanalysis.html](http://www.eng.fsu.edu/~abchan/CRTanalysis.html).

The web site includes the project abstract, list of project participants, and Technical Awareness Group (TAG) members, TAG meeting minutes, and project reports. Additional information will be included in the project web site as they become available.

Submit quarterly progress report.

This present report is the submission of the third quarterly progress report.
Appendix A – Surveys on CRT Recycling

The following cover letter and surveys were sent to county household hazardous waste managers, recycling center managers, and donation centers.

Survey to County Household Hazardous Waste Managers on CRT Recycling

Note: If you do not have actual data or percentages, please provide your best estimates and note this in your responses.

1) Method of CRT collection:
   a) How are CRTs collected: Curbside pick-up? Drop-off centers? Collection events? Other (please explain)?
   b) How many (or weight or percentage) from each collection source? What is the frequency of each collection source?
   c) Do you collect from private citizens only or can small businesses participate?
   d) What are the fees or incentives, if any, for participants?

2) Volume of CRTs received:
   a) How many (quantity or weight) CRTs have you received annually during the last 2 years? If you have monthly data or data going back to previous years, please include.
   b) How many (or %) are televisions vs. computer monitors?
   c) How many (or %) are from households? From small businesses? From donation centers? Other sources?

3) Has there been any significant change in the amount of CRTs received in the recent months?
   a) If yes, have you seen an increase or decrease? By how much?
   b) In your opinion, what do you think the reasons are for this change? Analog to digital TV signal conversion on February 17, 2009? Seasonal/events such as Christmas and Super Bowl? Other? Do you expect this trend to continue?

4) Processing CRTs:
   a) Please describe how the CRTs are processed (stored, sorted, recycled).
   b) Are any CRTs disposed rather than recycled? If so, why and how many (or %)?
   c) Where are they sent for recycling? What is the frequency of shipments (weekly, monthly, quarterly, upon request)? What volume (quantity or weight) is sent?
   d) What is the cost of processing (handling, transportation, recycling fees, etc.)?

5) What is your collection capacity (i.e., limits on the number of CRTs that may be received and/or processed per week or month due to storage, handling, etc.)?

6) Although not directly related to CRT management, we are interested in other electronics that you may receive. How many (quantity or weight) computers have you received annually during the last 2 years? Please specify for desktop vs. laptops.
Survey to Electronics Recycling Centers on CRT Recycling

Note: If you do not have actual data or percentages, please provide your best estimates and note this in your responses.

1) How are CRTs collected - Personal drop-off? Collection events? Municipal agreements/contracts? Commercial business accounts?

2) Volume of CRTs received:
   a) How many (quantity or weight) CRTs have you received annually during the last 2 years? If you have monthly data or data going back to previous years, please include.
   b) How many (or %) are televisions vs. computer monitors?
   c) How many (or %) are from households? Commercial? Donation centers? Other sources?

3) Has there been any significant change in the amount of CRTs received in the recent months?
   a) If yes, have you seen an increase or decrease? By how much?
   b) In your opinion, what do you think the reasons are for this change? Analog to digital TV signal conversion on February 17, 2009? Seasonal/events such as Christmas and Super Bowl? Other? Do you expect this trend to continue?

4) Requirements for incoming CRTs:
   a) Must they be disassembled? Or do you demanufacture at your facility?
   b) Are there minimum/maximum quantity requirements? If so, please describe.

5) What are your fees for receiving CRTs?

6) Process for recycling or demanufacturing CRTs at your facility:
   a) Please describe how the CRTs are recycled or demanufactured. What components or materials are separated?
   b) Are any items sent to landfills? If so, which items and how many?

7) Where are the following parts or materials sent? Please specify and to which state or country they are sent and to the type of facility (such as lead smelter; glass, metals, or plastics recycler; or electronics manufacturer).
   a) Leaded glass
   b) Cones
   c) Electron guns
   d) Circuit boards
   e) Cables
   f) Metals (steel, etc.)
   g) Plastics
8) Capacity:
   a) What is your collection capacity (i.e., limits on the number of CRTs that may be received per day, week, etc. due to storage availability)?
   b) What is your processing capacity per day or week? Please specify the constraints.

9) Although not directly related to CRT management, we are interested in other electronics that you may receive. How many (quantity or weight) computers have you received annually during the last 2 years? Please specify for desktop vs. laptops.
Survey to Donation Centers on CRT Management

Note: If you do not have actual data or percentages, please provide your best estimates and note this in your responses.

1) How are CRTs collected?

2) Volume of CRTs received:
   a) How many (quantity or weight) CRTs have you received annually during the last 2 years? If you have monthly data or data going back to previous years, please include.
   b) How many (or %) are televisions vs. computer monitors?
   a) Distribution (quantity or %) of CRTs collected - Residential? Commercial? Municipal?

3) Has there been any significant change in the amount of CRTs received in the recent months?
   a) If yes, have you seen an increase or decrease? By how much?
   b) In your opinion, what do you think are the reasons for this change? Analog to digital TV signal conversion on February 17, 2009? Seasonal/events such as Christmas and Super Bowl? Other? Do you expect this trend to continue?

4) Processing CRTs:
   a) Please describe how the CRTs are processed (stored, sorted, recycled).
   b) Are any CRTs disposed rather than recycled? If so, why and how many (or %)?
   c) Where are they sent? What volume (quantity or weight) is sent?
   d) What is the cost of processing (handling, transportation, recycling fees, etc.)?

5) What is your collection capacity (i.e., limits on the number of CRTs that may be received and/or processed per week or month due to storage, handling, etc.)?

6) Although not directly related to CRT management, we are interested in other electronics that you may receive. How many (quantity or weight) computers have you received annually during the last 2 years? Please specify for desktop
